

EcoPep: Oat Peptide For Multi-dimensional Skin Revitalisation

Peptides have become very popular again in recent years – particularly thanks to social media and the influence of American celebrities.

EcoPep is a highly potent active ingredient of a new generation: The natural peptides sourced from oats have a multidimensional effect on skin ageing and offer more than classic anti-ageing applications. The skin is holistically revitalised on a cellular, structural and visible level. EcoPep makes the skin look up to nine years younger.

Proven effectiveness:

- ✓ Stimulates the production of collagen and elastin
- ✓ Increases the thickness & density of the epidermis and dermis
- ✓ Improves the skin's moisturisation, firmness and elasticity
- ✓ Visibly and significantly reduces crow's feet and marionette lines

EcoPep is composed of a unique blend of natural oat peptides with a high degree of purity (> 90%). The molecule sizes are in the low and medium ranges between 300 and 3000 Da.

Therefore, EcoPep displays surface-active effects on the one hand and develops vitalising effects in the skin on the other hand: Elasticity is improved, sagging skin becomes firmer and visible signs of ageing are reduced.

EcoPep is made from European oats and produced by means of an environmentally friendly biotechnological process with the help of natural enzymes.

Applications:

- Slow Aging Natural Peptide Serum
- Multidimensional Revitalizing Cream
- Power Peptide Matrix Booster

INCI (EU/PCPC) Declaration: Avena sativa (Oat) Peptide

Properties:

- Fine powder, cold water soluble
- Recommended use level: 0,1% -1%
- COSMOS and NATRUE approved, Kosher and Halal compliant
- GMO free, vegan
